

**IN THE CLAIMS**

1. **(currently amended)** A communication service information providing method comprising the steps of:

receiving a call, which is transmitted from a calling subscriber for connecting to a called subscriber that subscribes to a plurality of communication services, said call being used to select one of the plurality of communication services; and

providing information related to another communication service subscribed to by the called subscriber for connecting to the calling subscriber, the provided information being usable for selecting, by the calling subscriber, said another communication service when the call to the called subscriber is in a non-connectable state.

2. **(currently amended)** A communication service information providing method comprising the steps of:

receiving a call, which is transmitted from a calling subscriber for connecting to a called subscriber that subscribes to a plurality of communication services, said call being used to select one of the plurality of communication services;

providing information related to another communication service subscribed to by the called subscriber for connecting to the calling subscriber, the provided information being usable for selecting, by the calling subscriber, said another communication service when the call to the called subscriber is in a non-connectable state; and

when the calling subscriber selects one of the other communication services from the provided information, trying to connect to the called subscriber by way of the selected other communication service.

3. – 14. (canceled)

**15. (currently amended)** A communication network comprising:

reception means for receiving a call from a calling terminal for connecting to a called terminal used by a subscriber of a communication counter party that wants to establish a communication and subscribes to a plurality of communication services, said call being used to select one of the plurality of communication services; and

providing means for providing information related to another communication service subscribed to by the subscriber of the communication counter party that wants to establish the communication for connecting to the calling terminal, the provided information being usable for selecting, at the calling terminal, said another communication service when the call to the called terminal is in a non-connectable state.

**16. (currently amended)** A communication network comprising:

reception means for receiving a call from a calling terminal for connecting to a called terminal used by a subscriber of a communication counter party that wants to establish a communication and subscribes to a plurality of communication services, said call being used to select one of the plurality of communication services;

providing means for providing information related to another communication service subscribed to by the subscriber of the communication counter party that wants to establish the communication for connecting to the calling terminal, the provided information being usable for selecting, at the calling terminal, said another communication service when the call to the called terminal is in a non-connectable state; and

connection means in which when the calling terminal selects one of other communication services from the provided information, the connection means tries to

connect with the subscriber of the communication counter party that wants to establish the communication by using the selected other communication service.

17. – 20. (canceled)

21. **(currently amended)** A communication service information providing method comprising the steps of:

receiving a call, which is transmitted from a calling subscriber for connecting to a called subscriber that subscribes to a plurality of communication services, said call being used to select one of the plurality of communication services; and

providing information related to another communication service subscribed to by the called subscriber and subscriber identification information corresponding to said another communication service, the provided information being usable for selecting, by the calling subscriber, said another communication service when the call to the called subscriber is in a non-connectable state.

22. – 23. (canceled)

24. **(currently amended)** A communication service information providing method comprising the steps of:

receiving an inquiry request related to a second subscriber from a first subscriber apparatus for connecting to the second subscriber;

transmitting information related to a communication service subscribed to by the second subscriber and subscriber identification information corresponding to the communication service, the transmitted information being usable to select, by the first

subscriber, the communication service when a call to the second subscriber is in a non-connectable state.
